

Cobra DocTools! Application Suite For Lotus Domino.Doc Environments

Harness the power of your Domino.Doc knowledge management infrastructure using Cobra DocTools!

Domino.Doc has transformed document management from a niche application for small groups of specialists to a scalable, flexible infrastructure available to every user across the organization.

The Cobra DocTools! Application Suite unites intelligent applications with the power of Domino.Doc to provide maximum return on your Domino.Doc investment.

Search...
all of your Domino.Doc libraries using field level parameters

Migrate...
information stored in legacy document management applications into Domino.Doc

Import...
files of any type into Domino.Doc as they are created by a scanner, a fax machine, or any other file creation program

The Cobra DocTools! Application Suite allows you to get powerful results faster and easier than ever...

- ✓ Search quickly and efficiently across your entire Domino.Doc infrastructure at the field level
- ✓ Migrate information stored in legacy document management applications into your Domino.Doc environment
- ✓ Import intellectual assets directly into your Domino.Doc infrastructure
- ✓ OCR your documents for full text search capabilities using the optional DocOCR module

...and Cobra Technologies' Consulting Services Division will be there to help!

- ✓ Domino.Doc implementation planning
- ✓ DocMigrate! integration services
- ✓ DocTools! Application Suite customizations for Lotus Notes applications

System Requirements

- ✓ Intel, AS400, UNIX and compatible systems
- ✓ Server hardware using Pentium 166 MHz or faster CPU
- ✓ Minimum of 128 MB of RAM for the Windows NT Server
- ✓ Microsoft Windows NT Server 4.0
- ✓ Lotus Domino Server 4.6x or 5.x
- ✓ For Domino.Doc 3.x, Domino 5.x is required

DocSearch!

DocSearch! is an out-of-the-box search tool that allows you to perform field level searches across all of your Domino.Doc libraries. Rather than conducting a Domino.Doc full text search, DocSearch! can define your searches at the field level to isolate the exact files you need. DocSearch! also allows the user to search for documents and then launch the attachments directly from the DocSearch! results screen. Searching can be performed from both a web browser and a Lotus Notes client, and frequently used searches can be defined and saved for later use.

DocMigrate!

DocMigrate! is a migration and import tool that provides users of legacy document management applications with a simplified migration path to Lotus Domino.Doc. Documents are migrated into your Domino.Doc library with their associated index information and file attachments intact. An integration service package is required for customization to your environment.

- Supports migration from Lotus Notes databases and fixed width text file sources to Domino.Doc.
- Migrate from virtually any legacy document management systems such as DOCS OPEN, SoftSolutions, and Documentum.

DocImport!

DocImport! is a universal Domino.Doc import tool that provides a simple and effective method for moving files of any type from a local or network drive into a Domino.Doc library. This can be done at runtime or on a scheduled basis. DocImport! can monitor an unlimited number of directories and is driven via a Lotus Notes user interface. Files can be imported with the filename as the document title and using static index information that is associated with a particular directory.
